Benefiting people and society

Strategy 2019-2023 and beyond in relation to green transition and sustainability

Our vision:

To contribute significantly to research and development that improves the lives of people and the sustainability of society

Henning Jørgensen
Senior Scientific Manager
hej@novo.dk

Life science research and industrial applications promoting **sustainability**

Life science strategy 2019-2023:

Strategic goal to support projects that ultimately contribute to **solving global challenges** through development of technologies for the sustainable production of food, goods and energy, e.g. by:

- Substituting and/or reducing the use of fossil-based resources
- Reducing emissions and removing greenhouse gases (GHG) from the atmosphere – in agriculture, food production or industrial processes
- Reducing land use for human activities and increasing the efficiency of agricultural and industrial production
- Developing solutions for sustainable agriculture and food supply
- Developing solutions for circular use of resources

The projects should contain a clear element of biotechnology

novo nordisk **fonden**

DKK 260 million **annually** in open competition within life science research

+DKK 2 Billion awarded within life science research in 2019 and 2020

Areas of support

- **Industrial and environmental biotechnology, plant science and agriculture and food biotechnology**
- Natural and technical sciences (physics, chemistry, mathematics, engineering, data science) supporting life science solutions

Funding options

- **Open competition: Postdoctoral fellowships, small projects (<DKK 3 million), thematized larger projects (DKK 60 million)**
- **Large strategic initiatives/centers DKK XXX million**
